

Overview: Laptop Pricing Data Set

Skills
Network

Estimated Effort: 5 mins

The dataset used for practice labs is a modified subset that maps the price of laptops with different attributes.

The dataset is a filtered and modified version of the [Laptop Price Prediction using specifications](#) dataset, available under the [Database Contents License \(DbCL\) v1.0](#) on the [Kaggle](#) website.

Parameters

The parameters used in the dataset are:

1. Manufacturer

The company that manufactured the laptop

2. Category

The category to which the laptop belongs: This parameter is mapped to numerical values in the following way:

Category	Assigned Value
Gaming	1
Netbook	2
Notebook	3
Ultrabook	4
Workstation	5

3. GPU

The manufacturer of the GPU. This parameter is mapped to numerical values in the following way:

GPU	Assigned Value
AMD	1
Intel	2
NVidia	3

4. OS

The operating system type (Windows or Linux): This parameter is mapped to numerical values in the following way:

OS	Assigned Value
Windows	1
Linux	2

5. CPU_core

The type of processor used in the laptop: This parameter is mapped to numerical values in the following way:

CPU_core	Assigned Value
Intel Pentium i3	3
Intel Pentium i5	5
Intel Pentium i7	7

6. Screen_Size_cm

The size of the laptop screen is recorded in cm.

7. CPU_frequency

The frequency at which the CPU operates, in GHz.

8. RAM_GB

The size of the RAM of the system in GB.

9. Storage_GB_SSD

The size of the SSD storage in GB is installed in the laptop.

10. Weight_kg

The weight of the laptop is in kgs.

11. Price

The price of the laptop is in USD.
